EDUCATION & CERTIFICATIONS

- North Carolina State University, Raleigh, USA**
Master of Science, Mechanical Engineering — **GPA: 3.57/4.0** (2011–2013)
- National Institute of Technology (NIT) Rourkela, India**
Bachelor of Technology, Mechanical Engineering — **7.2/10** (2005–2009)
- LangChain for LLM Application Development
- Multi-Agent Systems Certification
- Certified Scrum Product Owner (CSPO)

EXECUTIVE SUMMARY

AI-driven Senior Product Manager with 10+ years of experience building enterprise SaaS, AI/ML products, GenAI copilots, RAG systems, and PaaS-based solutions for global engineering, infrastructure, and industrial-tech clients. Proven success delivering LLM-powered products, transforming business requirements into scalable platforms, and leading end-to-end product lifecycle across strategy, prioritization, delivery, and go-to-market. Strong expertise in Azure PaaS, MLOps-aware development, AI governance, customer workshops, multi-region deployments, and cross-functional leadership. Actively targeting Senior Product Manager / Product Manager / Senior Product Owner / Product Owner roles across the UAE and GCC.

WORK EXPERIENCE

Hexagon AB | Industrial Technology & Enterprise Software (SaaS, CAD, AI/ML)

Abu Dhabi, UAE

SENIOR PRODUCT MANAGER

January 2023 – Present

PRODUCT MANAGER

September 2018 – December 2022

- Led end-to-end strategy for AI product innovation, building and scaling LLM-based agentic systems (AI copilots) that automated complex 3D engineering and design workflows, achieving 3× faster execution and saving hundreds of engineering hours per month across global customer teams.
- Delivered enterprise-grade AI agents enabling natural-language queries on complex databases, significantly improving access to mission-critical data and accelerating cross-functional decision-making.
- Launched a secure, production-ready RAG assistant trained on proprietary knowledge bases, enabling expert-level query resolution and deflecting 40% of support tickets, resulting in substantial SLA and operational cost reduction.
- Designed and implemented an AI use-case prioritization framework using cost-impact and effort-based scoring models, enabling data-driven roadmap decisions for multiple business units and improving alignment with commercial and technical KPIs.
- Defined and operationalized product telemetry and ROI measurement KPIs to quantify feature-level time savings, business value delivery, and user adoption metrics across the AI product portfolio.
- Championed Responsible AI standards, ensuring full compliance with traceability, governance, security, and ethical AI development practices across the entire model lifecycle.
- Delivered two high-impact AI MVPs within 12 months, driving the full process from problem framing to prototyping, refinement, user testing, and field validation across five international regions.
- Led 100+ executive stakeholder and customer discovery workshops, identifying AI opportunities, shaping product vision, and driving cross-functional alignment between engineering, design, data science, GTM, and customer success teams.
- Recognized with the “Voice of the Customer” award for delivering measurable productivity gains and high-impact outcomes for enterprise users.

SKILLS

- Product Strategy & Roadmapping
- AI/ML Product Development
- Generative AI (LLMs, RAG, Agentic Systems)
- Enterprise SaaS Product Lifecycle
- Azure PaaS
- MLOps Awareness
- Data-Driven Prioritization
- Stakeholder Management
- Engineering Collaboration
- Backlog Grooming
- Sprint Planning
- Customer Research & Discovery Workshops
- Enterprise UX Strategy
- Telemetry Integration
- ROI Tracking
- Responsible AI Practices
- Governance, Security & Compliance
- Go-to-Market Enablement
- Cross-Functional Leadership

Hexagon AB — Engineering Software & Infrastructure Technology (SaaS / Industrial Tech)

Huntsville, Alabama

September 2013 – September 2018

SUPPORT ANALYST

- Led support for mission-critical enterprise deployments powering multi-billion-dollar infrastructure projects, ensuring continuous uptime, contractual compliance, and seamless customer operations across highly available systems.
- Collaborated closely with engineering and product teams to escalate, triage, and resolve complex platform issues, directly influencing product quality and accelerating release cycles.
- Drove improvements in customer experience by identifying recurring technical pain points and recommending product enhancements that reduced issue recurrence and improved platform reliability.
- Developed advanced SDK-driven automation scripts to eliminate repetitive manual processes, improving operational efficiency and reducing engineering effort by 80%.
- Authored comprehensive Knowledge Base documentation, capturing deep technical expertise and improving customer self-service, resulting in a 25% reduction in ticket resolution time and enhanced support scalability.
- Promoted to Product Manager in recognition of consistent delivery excellence, strong technical problem-solving, and demonstrated capability to translate customer needs into product improvements.
